Journal of Power Sources 54 (1995) 531–537

JOURNAL OF POWER SOURCES

Subject Index of Volume 54

Additives
characterization of the lithium–organic electrolyte interface containing inorganic and organic additives by in situ techniques, 301
Alkali metals
reversible lithium intercalation in alkali metal vanadium bronzes ($M_xV_6O_{13+\delta}$, where M = K, Rb or Cs), 470
Aluminium
cyclic voltammetric and Raman spectroscopic studies of the $Li/LiAlCl_4/SO_2$ and $Li/LiGaCl_4/SO_2$ rechargeable systems, 356
Anodes
novel forms of carbon as potential anodes for lithium batteries, 11
an X-ray photoelectron spectroscopy study on the surface film on carbon black anode in lithium secondary cells, 171
influence of the composition of lithium-based alloys, non-aqueous electrolytes and cycling conditions on the anode properties, 416
a modification in the preparation process of a carbon whisker for the anode performance of lithium rechargeable batteries, 425
in situ electrochemical characterization of lithium-alloying materials for rechargeable anodes in lithium batteries, 428
electrochemical behavior of an advanced graphite whisker anodic electrode for lithium-ion rechargeable batteries, 435
irreversible capacity of lithium secondary battery using meso-carbon micro beads as anode material, 440
charge/discharge characteristics of synthetic carbon anode for lithium secondary battery, 444
a composite carbon anode for use in a polymer electrolyte battery, 516
Anodic oxidation
anodic oxidation of propylene carbonate and ethylene carbonate on graphite electrodes, 250

Bipolar cell design
high rate lithium/thionyl chloride bipolar battery development, 180
Boron
chemistry and structure analysis in the $Li_{4+x}B_xSi_{1-x}O_4$ solid solution, 448

Capacity
factor affecting the capacity retention of lithium-ion cells, 99
Carbon
novel forms of carbon as potential anodes for lithium batteries, 11
carbon electrode materials for lithium-ion batteries, 271
electrochemical behaviour of coated lithium–carbon electrodes, 369
high reversible capacity carbon–lithium negative electrode in polymer electrolyte, 411
a modification in the preparation process of a carbon whisker for the anode performance of lithium rechargeable batteries, 425
irreversible capacity of lithium secondary battery using meso-carbon micro beads as anode material, 440
charge/discharge characteristics of synthetic carbon anode for lithium secondary battery, 444
Carbonaceous materials
battery characteristics with various carbonaceous materials, 1
relationship between carbonaceous materials and electrolyte in secondary lithium-ion batteries, 6
Carbon anodes
rechargeable carbon anode, 72
performance of lithium-ion rechargeable batteries: graphite whisker/electrolyte/$LiCoO_2$ rocking-chair system, 236
comparative thermal stability of carbon intercalation anodes and lithium metal anodes for rechargeable lithium batteries, 240
Carbon black
an X-ray photoelectron spectroscopy study on the surface film on carbon black anode in lithium secondary cells, 171
Carbon filming
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228
Carbon–lithium
electrochemical behavior of an advanced graphite whisker anodic electrode for lithium-ion rechargeable batteries, 435
Cathode materials
characterization of silver vanadium oxide cathode material by high-resolution electron microscopy, 68
optical measurement of lithium diffusivity in cathode materials: amorphous MoO_3 films, 218
structural, physical and electrochemical characteristics of a vanadium oxysulfide, a cathode material for lithium batteries, 246
the $LiNiO_2$ solid solution as a cathode material for rechargeable lithium batteries, 329
Cathodes
3 V and 4 V lithium manganese oxide cathodes for rechargeable lithium batteries, 52
electrochemical properties of cathodic materials synthesized by low-temperature techniques, 120
practical batteries based on the SWING system, 151
high rate lithium/thionyl chloride bipolar battery development, 180
synthesis and properties of $LiNiO_2$ as cathode material for secondary batteries, 209
synthesis of sulfide cathodic materials and study of their physicochemical properties and electrochemical activity, 264
cobalt stabilized layered lithium–nickel oxides, cathodes in lithium rechargeable cells, 268
evaluation of composite-MnO_2 as cathode material for rechargeable Li/MnO_2 batteries, 367

Elsevier Science S.A.

oxide cathode with perovskite structure for rechargeable lithium batteries, 397
hydrothermal synthesis of electrode materials Pyrochlore tungsten trioxide film, 461
three V or 4 V Li–Mn composite as cathode in Li batteries prepared by $LiNO_3$ method as Li source, 483
amorphous MoS_2 as the cathode of lithium secondary batteries, 508
Chromium
rechargeable cathodes based on $Li_2Cr_xMn_{2-x}O_4$, 205
Cobalt
cobalt stabilized layered lithium–nickel oxides, cathodes in lithium rechargeable cells, 268
Cobalt oxide
cycle-life improvement of $Li/LiCoO_2$ batteries, 316
low-temperature cobalt oxide as rechargeable cathodic material for lithium batteries, 373
high performance $LiCoO_2$ positive electrode material, 389
2/3 A-size rechargeable battery employing $LiCoO_2$ thin-film cathode, 403
studies of electrochemical properties of lithium cobalt oxide, 491
electrochemical characteristics of $LiNiO_2$ and $LiCoO_2$ as a positive material for lithium secondary batteries, 522
Composite carbon
a composite carbon anode for use in a polymer electrolyte battery, 516
Computer aid
can first principles calculations aid in lithium-ion battery design?, 16
Conductivity
cationic conductivity in poly(oxyethylene oxide) networks, 456
Copper
re-examination of copper Chevrel-phase sulfides as cathode in lithium secondary batteries, 519
Corrosion
problems of corrosion and other electrochemical side processes in lithium chemical power sources with non-aqueous electrolytes, 421
Crystal structure
can first principles calculations aid in lithium-ion battery design?, 16
crystal structures and electrochemical properties of $LiAl_y$-$Ni_{1-y}O_2$ solid solution, 221
lithium-ion cell based on orthorhombic $LiMnO_2$, 232
chemistry and structure analysis in the $Li_{4+x}B_xSi_{1-x}O_4$ solid solution, 448
crystal structure study of $LiNi_{1-x}Mn_xO_2$, 511
Cycle life
cycle-life improvement of $Li/LiCoO_2$ batteries, 316
Cycling
influence of the composition of lithium-based alloys, non-aqueous electrolytes and cycling conditions on the anode properties, 416
Cycling efficiency
the correlation between the cycling efficiency, surface chemistry and morphology of Li electrodes in electrolyte solutions based on methyl formate, 281

Dilatometry
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228
Dimethoxyethane solutions
effects of water additions on the passivity of iron in dimethoxyethane solutions, 85

Electric vehicles
development and characterization of bipolar lithium composite polymer electrolyte (CPE)–FeS_2 battery for applications in electric vehicles, 496
Electrode/electrolyte interface
method of evaluating relative safety of porous electrode/electrolyte combinations to spot heating, 192
Electrodes
carbon electrode materials for lithium-ion batteries, 271
impedance spectroscopy of lithium and nickel electrodes in propylene carbonate solutions of different lithium salts. A comparative study, 289
electrochemical behaviour of coated lithium–carbon electrodes, 369
dependence of the morphology of graphitic electrodes on the electrochemical intercalation of lithium ions, 383
high performance $LiCoO_2$ positive electrode material, 389
problems of corrosion and other electrochemical side processes in lithium chemical power sources with non-aqueous electrolytes, 421
peculiarities of lithium-cation kinetics through passivating film on the surface of lithium electrodes, 433
cokes as negative electrodes in secondary batteries, 494
photoelectrochemical currents and noises on a lithium electrode, 525
Electrolytes
relationship between carbonaceous materials and electrolyte in secondary lithium-ion batteries, 6
recent studies of the lithium-liquid electrolyte interface. Electrochemical, morphological and spectral studies of a few important systems, 76
high voltage stable liquid electrolytes for $Li_{1+x}Mn_2O_4$/carbon rocking-chair lithium batteries, 92
characterization of lithium and electrolytes by electrochemical impedance spectroscopy, 378
influence of the composition of lithium-based alloys, non-aqueous electrolytes and cycling conditions on the anode properties, 416
problems of corrosion and other electrochemical side processes in lithium chemical power sources with non-aqueous electrolytes, 421
Ethylene carbonate
anodic oxidation of propylene carbonate and ethylene carbonate on graphite electrodes, 250

Gallium
cyclic voltammetric and Raman spectroscopic studies of the $Li/LiAlCl_4/SO_2$ and $Li/LiGaCl_4/SO_2$ rechargeable systems, 356
Graphite
charge and discharge characteristics of lithium-ion graphite electrodes in solid-state cells, 338
dependence of the morphology of graphitic electrodes on the electrochemical intercalation of lithium ions, 383
Graphite electrodes
anodic oxidation of propylene carbonate and ethylene carbonate on graphite electrodes, 250
Graphite whisker
performance of lithium-ion rechargeable batteries: graphite whisker/electrolyte/$LiCoO_2$ rocking-chair system, 236
electrochemical behavior of an advanced graphite whisker anodic electrode for lithium-ion rechargeable batteries, 435

Heat management
electricity–heat power and energy balance for $Li/SOCl_2$ batteries, 259

Impedance spectroscopy
impedance spectroscopy of lithium and nickel electrodes in propylene carbonate solutions of different lithium salts. A comparative study, 289
Implantable medical applications
reliability systems for implantable cardiac defibrillator batteries, 115
Infrared reflectance spectroscopy
the use of polarized light in the infrared reflectance spectroscopic investigation of the lithium–organic electrolyte interface, 296
Inorganic electrolyte additives
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228
Inorganic protective films
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228
Insertion
electrochemical insertion of lithium, sodium, and magnesium in molybdenum(VI) oxide, 346
magnesium insertion batteries — an alternative to lithium?, 479
Intercalation
origin of the improved cycling capability of sol–gel prepared $Fe_{0.12}V_2O_{5.16}$ compared with V_2O_5, 342
dependence of the morphology of graphitic electrodes on the electrochemical intercalation of lithium ions, 383
Ion conductivity
new solvating cross-linked polyether for lithium batteries, 34
development of a new plasticizer for poly(ethylene oxide)-based polymer electrolyte and the investigation of their ion-pair dissociation effect, 198
Iron
polypyridine complexes of iron used as redox shuttles for overcharge protection of secondary lithium batteries, 255
Iron disulfide
development and characterization of bipolar lithium composite polymer electrolyte (CPE)–FeS_2 battery for applications in electric vehicles, 496
Iron passitivity
effects of water additions on the passivity of iron in dimethoxyethane solutions, 85
Iron sulfides
safety characteristics of lithium alloy/metal sulfide batteries, 134
Iron vanadium oxide
origin of the improved cycling capability of sol–gel prepared $Fe_{0.12}V_2O_{5.16}$ compared with V_2O_5, 342

Japan
lithium secondary batteries in Japan, 306

Lithiated nickel oxide
Li_xNiO_2, a promising cathode for rechargeable lithium batteries, 109
Lithium
3 V and 4 V lithium manganese oxide cathodes for rechargeable lithium batteries, 52
recent studies of the lithium-liquid electrolyte interface. Electrochemical, morphological and spectral studies of a few important systems, 76
the $Li_{1+x}Mn_2O_4$/C system Materials and electrochemical aspects, 103
rechargeable cathodes based on $Li_2Cr_xMn_{2-x}O_4$, 205
synthesis and properties of $LiNiO_2$ as cathode material for secondary batteries, 209
fabrication and characterization of an Li–Mn–O thin-film cathode for rechargeable lithium microbatteries, 224
lithium-ion cell based on orthorhombic $LiMnO_2$, 232
impedance spectroscopy of lithium and nickel electrodes in propylene carbonate solutions of different lithium salts. A comparative study, 289
the $LiNiO_2$ solid solution as a cathode material for rechargeable lithium batteries, 329
lithium insertion into silver vanadium oxide, $Ag_2V_4O_{11}$, 334
electrochemical insertion of lithium, sodium, and magnesium in molybdenum(VI) oxide, 346
electrochemical behaviour of coated lithium–carbon electrodes, 369
characterization of lithium and electrolytes by electrochemical impedance spectroscopy, 378
high performance $LiCoO_2$ positive electrode material, 389
high reversible capacity carbon–lithium negative electrode in polymer electrolyte, 411
peculiarities of lithium-cation kinetics through passivating film on the surface of lithium electrodes, 433
chemistry and structure analysis in the $Li_{4+x}B_xSi_{1-x}O_4$ solid solution, 448
magnesium insertion batteries — an alternative to lithium?, 479
three V or 4 V Li–Mn composite as cathode in Li batteries prepared by $LiNO_3$ method as Li source, 483
studies of electrochemical properties of lithium cobalt oxide, 491
crystal structure study of $LiNi_{1-x}Mn_xO_2$, 511
photoelectrochemical currents and noises on a lithium electrode, 525
Lithium/electrolyte interfaces
novel in situ and ex situ techniques for the study of lithium/electrolyte interfaces, 20
Lithium/thionyl chloride batteries
high rate lithium/thionyl chloride bipolar battery development, 180
Lithium/thionyl chloride cells
development and characterization of a high capacity lithium/thionyl chloride battery, 186
Lithium alloys
safety characteristics of lithium alloy/metal sulfide batteries?, 134
in situ electrochemical characterization of lithium-alloying materials for rechargeable anodes in lithium batteries, 428
Lithium anode
comparative thermal stability of carbon intercalation anodes and lithium metal anodes for rechargeable lithium batteries, 240
Lithium-based alloys
influence of the composition of lithium-based alloys, non-aqueous electrolytes and cycling conditions on the anode properties, 416
Lithium batteries
can first principles calculations aid in lithium-ion battery design?, 16
raman spectroscopic and electrochemical studies of lithium battery components, 28
new solvating cross-linked polyether for lithium batteries, 34
general safety considerations for high power Li/$SOCl_2$ batteries, 127
safety characteristics of lithium alloy/metal sulfide batteries?, 134
toxicity of materials used in the manufacture of lithium batteries, 138
large lithium polymer battery development. The immobile solvent concept, 163

method of evaluating relative safety of porous electrode/electrolyte combinations to spot heating, 192
structural, physical and electrochemical characteristics of a vanadium oxysulfide, a cathode material for lithium batteries, 246
electricity–heat power and energy balance for $Li/SOCl_2$ batteries, 259
synthesis of sulfide cathodic materials and study of their physicochemical properties and electrochemical activity, 264
study of all-solid state lithium/polyacenic semiconductor (PAS) battery, 276
electro-thermal modelling of polymer lithium batteries for starting period and pulse power, 393
problems of corrosion and other electrochemical side processes in lithium chemical power sources with non-aqueous electrolytes, 421
lithium thionyl chloride cells and batteries. Technical predictions versus 1994 realities, 452
three V or 4 V Li–Mn composite as cathode in Li batteries prepared by $LiNO_3$ method as Li source, 483

Lithium–carbon anodes
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228

Lithium cation
peculiarities of lithium-cation kinetics through passivating film on the surface of lithium electrodes, 433

Lithium composite batteries
development and characterization of bipolar lithium composite polymer electrolyte (CPE)–FeS_2 battery for applications in electric vehicles, 496

Lithium diffusivity
optical measurement of lithium diffusivity in cathode materials: amorphous MoO_3 films, 218

Lithium electrodes
the correlation between the cycling efficiency, surface chemistry and morphology of Li electrodes in electrolyte solutions based on methyl formate, 281
the use of polarized light in the infrared reflectance spectroscopic investigation of the lithium–organic electrolyte interface, 296
characterization of the lithium–organic electrolyte interface containing inorganic and organic additives by in situ techniques, 301

Lithium–graphite intercalation compounds
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228

Lithium insertion
low-temperature cobalt oxide as rechargeable cathodic material for lithium batteries, 373

Lithium intercalation
intercalation of lithium in r.f.-sputtered niobium oxide film as electrode material for lithium-ion batteries, 175
reversibility of lithium intercalation in lithium and sodium phyllomanganates, 319
formation of the ω-type phase by lithium intercalation in (Mo, V) oxides deriving from V_2O_5, 406
lithium intercalation in the divalent metal vanadates MeV_2O_6 (Me = Cu, Co, Ni, Mn or Zn), 465
reversible lithium intercalation in alkali metal vanadium bronzes ($M_xV_6O_{13+\delta}$, where M = K, Rb or Cs), 470
kinetics and thermodynamics of the lithium insertion reaction in spinel phase $Li_xMn_2O_4$, 475
studies of electrochemical properties of lithium cobalt oxide, 491

Lithium-ion batteries
practical batteries based on the SWING system, 151
lithium-ion battery for electronic applications, 155
intercalation of lithium in r.f.-sputtered niobium oxide film as electrode material for lithium-ion batteries, 175
carbon electrode materials for lithium-ion batteries, 271
charge and discharge characteristics of lithium-ion graphite electrodes in solid-state cells, 338
electrochemical behavior of an advanced graphite whisker anodic electrode for lithium-ion rechargeable batteries, 435

Lithium-ion cells
factor affecting the capacity retention of lithium-ion cells, 99
the $Li_{1+x}Mn_2O_4/C$ system. Materials and electrochemical aspects, 103
lithium-ion cell based on orthorhombic $LiMnO_2$, 232

Lithium ions
dependence of the morphology of graphitic electrodes on the electrochemical intercalation of lithium ions, 383

Lithium secondary cells
an X-ray photoelectron spectroscopy study on the surface film on carbon black anode in lithium secondary cells, 171

Low-temperature techniques
electrochemical properties of cathodic materials synthesized by low-temperature techniques, 120

Magnesium
electrochemical insertion of lithium, sodium, and magnesium in molybdenum(VI) oxide, 346
magnesium insertion batteries — an alternative to lithium?, 479

Manganese
rechargeable cathodes based on $Li_2Cr_xMn_{2-x}O_4$, 205
three V or 4 V Li–Mn composite as cathode in Li batteries prepared by $LiNO_3$ method as Li source, 483
crystal structure study of $LiNi_{1-x}Mn_xO_2$, 511

Manganese dioxide
the $Li_{1+x}Mn_2O_4/C$ system Materials and electrochemical aspects, 103
performances and safety behaviour of rechargeable AA-size Li/Li_xMnO_2 cell, 143
practical batteries based on the SWING system, 151
fabrication and characterization of an Li–Mn–O thin-film cathode for rechargeable lithium microbatteries, 224
lithium-ion cell based on orthorhombic $LiMnO_2$, 232

Manganese oxide
3 V and 4 V lithium manganese oxide cathodes for rechargeable lithium batteries, 52
rechargeable lithium battery with spinel-related λ-MnO_2. III. Scaling-up problems associated with $LiMn_2O_4$ synthesis, 323
evaluation of composite-MnO_2 as cathode material for rechargeable Li/MnO_2 batteries, 367
kinetics and thermodynamics of the lithium insertion reaction in spinel phase $Li_xMn_2O_4$, 475

Methyl formate
the correlation between the cycling efficiency, surface chemistry and morphology of Li electrodes in electrolyte solutions based on methyl formate, 281

Molybdenum oxide
optical measurement of lithium diffusivity in cathode materials: amorphous MoO_3 films, 218
electrochemical insertion of lithium, sodium, and magnesium in molybdenum(VI) oxide, 346
formation of the ω-type phase by lithium intercalation in (Mo, V) oxides deriving from V_2O_5, 406

Molybdenum oxysulfide
new amorphous molybdenum oxysulfide thin films. Their characterization and their electrochemical properties, 353

Molybdenum sulfide
amorphous MoS_2 as the cathode of lithium secondary batteries, 508

re-examination of copper Chevrel-phase sulfides as cathode in lithium secondary batteries, 519
Morphology
the correlation between the cycling efficiency, surface chemistry and morphology of Li electrodes in electrolyte solutions based on methyl formate, 281

Negative electrodes
battery characteristics with various carbonaceous materials, 1
high reversible capacity carbon–lithium negative electrode in polymer electrolyte, 411
cokes as negative electrodes in secondary batteries, 494
Nickel
synthesis and properties of $LiNiO_2$ as cathode material for secondary batteries, 209
impedance spectroscopy of lithium and nickel electrodes in propylene carbonate solutions of different lithium salts. A comparative study, 289
crystal structure study of $LiNi_{1-x}Mn_xO_2$, 511
Nickel oxide
Li_xNiO_2, a promising cathode for rechargeable lithium batteries, 109
crystal structures and electrochemical properties of $LiAl_y$-$Ni_{1-y}O_2$ solid solution, 221
cobalt stabilized layered lithium–nickel oxides, cathodes in lithium rechargeable cells, 268
the $LiNiO_2$ solid solution as a cathode material for rechargeable lithium batteries, 329
electrochemical characteristics of $LiNiO_2$ and $LiCoO_2$ as a positive material for lithium secondary batteries, 522
Niobium oxide
intercalation of lithium in r.f.-sputtered niobium oxide film as electrode material for lithium-ion batteries, 175

Organic electrolytes
the use of polarized light in the infrared reflectance spectroscopic investigation of the lithium–organic electrolyte interface, 296
characterization of the lithium–organic electrolyte interface containing inorganic and organic additives by in situ techniques, 301

Perovskite oxide
oxide cathode with perovskite structure for rechargeable lithium batteries, 397
Phyllomanganates
reversibility of lithium intercalation in lithium and sodium phyllomanganates, 319
Plasticization
plasticization of cross-linked polymer electrolytes, 487
Polyaniline
charge/discharge characteristics of polyaniline-based polymer composite positives for rechargeable lithium batteries, 214
Polycondensation
new solvating cross-linked polyether for lithium batteries, 34
Poly(ethylene oxide)
development of a new plasticizer for poly(ethylene oxide)-based polymer electrolyte and the investigation of their ion-pair dissociation effect, 198
Polymer electrolyte cells
large lithium polymer battery development. The immobile solvent concept, 163
development of a new plasticizer for poly(ethylene oxide)-based polymer electrolyte and the investigation of their ion-pair dissociation effect, 198
electro-thermal modelling of polymer lithium batteries for starting period and pulse power, 393
a composite carbon anode for use in a polymer electrolyte battery, 516
Polymer electrolytes
new solvating cross-linked polyether for lithium batteries, 34
study of all-solid state lithium/polyacenic semiconductor (PAS) battery, 276
high reversible capacity carbon–lithium negative electrode in polymer electrolyte, 411
electrochemical behavior of an advanced graphite whisker anodic electrode for lithium-ion rechargeable batteries, 435
plasticization of cross-linked polymer electrolytes, 487
development and characterization of bipolar lithium composite polymer electrolyte (CPE)–FeS_2 battery for applications in electric vehicles, 496
Poly(oxyethylene) network
new solvating cross-linked polyether for lithium batteries, 34
Poly(oxyethylene oxide) network
cationic conductivity in poly(oxyethylene oxide) networks, 456
Polypyridine
polypyridine complexes of iron used as redox shuttles for overcharge protection of secondary lithium batteries, 255
Porous electrodes
method of evaluating relative safety of porous electrode/electrolyte combinations to spot heating, 192
Propylene carbonate
anodic oxidation of propylene carbonate and ethylene carbonate on graphite electrodes, 250
impedance spectroscopy of lithium and nickel electrodes in propylene carbonate solutions of different lithium salts. A comparative study, 289
Protective layers
electrochemical behaviour of coated lithium–carbon electrodes, 369

Raman spectroscopy
raman spectroscopic and electrochemical studies of lithium battery components, 28
Rechargeable batteries
study of all-solid state lithium/polyacenic semiconductor (PAS) battery, 276
Rechargeable cathodes
rechargeable cathodes based on $Li_2Cr_xMn_{2-x}O_4$, 205
Rechargeable cathodic materials
electrochemical properties of cathodic materials synthesized by low-temperature techniques, 120
low-temperature cobalt oxide as rechargeable cathodic material for lithium batteries, 373
Rechargeable lithium batteries
novel forms of carbon as potential anodes for lithium batteries, 11
room temperature rechargeable polymer electrolyte batteries, 40
modeling the performance of rechargeable lithium-based cells: design correlations for limiting cases, 46
3 V and 4 V lithium manganese oxide cathodes for rechargeable lithium batteries, 52
thin-film rechargeable lithium batteries, 58
development and performance of a rechargeable thin-film solid-state microbattery, 63
rechargeable carbon anode, 72
recent studies of the lithium-liquid electrolyte interface. Electrochemical, morphological and spectral studies of a few important systems, 76
high voltage stable liquid electrolytes for $Li_{1+x}Mn_2O_4$/carbon rocking-chair lithium batteries, 92

the $Li_{1+x}Mn_2O_4$/C system Materials and electrochemical aspects, 103
Li_xNiO_2, a promising cathode for rechargeable lithium batteries, 109
development of coin-type lithium-ion rechargeable batteries, 146
practical batteries based on the SWING system, 151
lithium-ion battery for electronic applications, 155
development of a new plasticizer for poly(ethylene oxide)-based polymer electrolyte and the investigation of their ion-pair dissociation effect, 198
charge/discharge characteristics of polyaniline-based polymer composite positives for rechargeable lithium batteries, 214
crystal structures and electrochemical properties of $LiAl_y$-$Ni_{1-y}O_2$ solid solution, 221
fabrication and characterization of an Li–Mn–O thin-film cathode for rechargeable lithium microbatteries, 224
performance of lithium-ion rechargeable batteries: graphite whisker/electrolyte/$LiCoO_2$ rocking-chair system, 236
comparative thermal stability of carbon intercalation anodes and lithium metal anodes for rechargeable lithium batteries, 240
cobalt stabilized layered lithium–nickel oxides, cathodes in lithium rechargeable cells, 268
polymer nanocomposites: a new strategy for synthesizing solid electrolytes for rechargeable lithium batteries, 310
cycle-life improvement of Li/$LiCoO_2$ batteries, 316
rechargeable lithium battery with spinel-related λ-MnO_2. III. Scaling-up problems associated with $LiMn_2O_4$ synthesis, 323
the $LiNiO_2$ solid solution as a cathode material for rechargeable lithium batteries, 329
cyclic voltammetric and Raman spectroscopic studies of the Li/$LiAlCl_4$/SO_2 and Li/$LiGaCl_4$/SO_2 rechargeable systems, 356
evaluation of composite-MnO_2 as cathode material for rechargeable Li/MnO_2 batteries, 367
oxide cathode with perovskite structure for rechargeable lithium batteries, 397
2/3 A-size rechargeable battery employing $LiCoO_2$ thin-film cathode, 403
a modification in the preparation process of a carbon whisker for the anode performance of lithium rechargeable batteries, 425
in situ electrochemical characterization of lithium-alloying materials for rechargeable anodes in lithium batteries, 428
a new approach to the improvement of $Li_{1+x}V_3O_8$ performance in rechargeable lithium batteries, 501

Rechargeable lithium cells
factor affecting the capacity retention of lithium-ion cells, 99
performances and safety behaviour of rechargeable AA-size Li/Li_xMnO_2 cell, 143

Redox shuttles
polypyridine complexes of iron used as redox shuttles for overcharge protection of secondary lithium batteries, 255

Reliability
reliability systems for implantable cardiac defibrillator batteries, 115

Rietveld structure
origin of the improved cycling capability of sol–gel prepared $Fe_{0.12}V_2O_{5.16}$ compared with V_2O_5, 342

Rocking-chair lithium batteries
high voltage stable liquid electrolytes for $Li_{1+x}Mn_2O_4$/carbon rocking-chair lithium batteries, 92

Safety
general safety considerations for high power Li/$SOCl_2$ batteries, 127
safety characteristics of lithium alloy/metal sulfide batteries?, 134
toxicity of materials used in the manufacture of lithium batteries, 138
performances and safety behaviour of rechargeable AA-size Li/Li_xMnO_2 cell, 143
development and characterization of a high capacity lithium/thionyl chloride battery, 186
method of evaluating relative safety of porous electrode/electrolyte combinations to spot heating, 192
comparative thermal stability of carbon intercalation anodes and lithium metal anodes for rechargeable lithium batteries, 240

Secondary lithium batteries
relationship between carbonaceous materials and electrolyte in secondary lithium-ion batteries, 6
synthesis and properties of $LiNiO_2$ as cathode material for secondary batteries, 209
polypyridine complexes of iron used as redox shuttles for overcharge protection of secondary lithium batteries, 255
the correlation between the cycling efficiency, surface chemistry and morphology of Li electrodes in electrolyte solutions based on methyl formate, 281
lithium secondary batteries in Japan, 306
thin-film cathodes for secondary lithium batteries, 362
irreversible capacity of lithium secondary battery using meso-carbon micro beads as anode material, 440
charge/discharge characteristics of synthetic carbon anode for lithium secondary battery, 444
cokes as negative electrodes in secondary batteries, 494
amorphous MoS_2 as the cathode of lithium secondary batteries, 508
re-examination of copper Chevrel-phase sulfides as cathode in lithium secondary batteries, 519
electrochemical characteristics of $LiNiO_2$ and $LiCoO_2$ as a positive material for lithium secondary batteries, 522

Silicon oxide
chemistry and structure analysis in the $Li_{4+x}B_xSi_{1-x}O_4$ solid solution, 448

Silver
characterization of silver vanadium oxide cathode material by high-resolution electron microscopy, 68
lithium insertion into silver vanadium oxide, $Ag_2V_4O_{11}$, 334

Single cation
cationic conductivity in poly(oxyethylene oxide) networks, 456

Sodium
reversibility of lithium intercalation in lithium and sodium phyllomanganates, 319
electrochemical insertion of lithium, sodium, and magnesium in molybdenum(VI) oxide, 346

Sodium rechargeable batteries
magnesium insertion batteries – an alternative to lithium?, 479

Solid solution
chemistry and structure analysis in the $Li_{4+x}B_xSi_{1-x}O_4$ solid solution, 448

Solid-state batteries
plasticization of cross-linked polymer electrolytes, 487

Solid-state cells
charge and discharge characteristics of lithium-ion graphite electrodes in solid-state cells, 338

Solvated graphite-intercalation compounds
filming mechanism of lithium–carbon anodes in organic and inorganic electrolytes, 228

Space applications
development and characterization of a high capacity lithium/thionyl chloride battery, 186

Spinel
kinetics and thermodynamics of the lithium insertion reaction in spinel phase $Li_xMn_2O_4$, 475
Spot heating
method of evaluating relative safety of porous electrode/electrolyte combinations to spot heating, 192
Sulfide
synthesis of sulfide cathodic materials and study of their physicochemical properties and electrochemical activity, 264
Sulfur dioxide
cyclic voltammetric and Raman spectroscopic studies of the $Li/LiAlCl_4/SO_2$ and $Li/LiGaCl_4/SO_2$ rechargeable systems, 356
Surface chemistry
the correlation between the cycling efficiency, surface chemistry and morphology of Li electrodes in electrolyte solutions based on methyl formate, 281
Surface films
an X-ray photoelectron spectroscopy study on the surface film on carbon black anode in lithium secondary cells, 171
Synthesis
synthesis and properties of $LiNiO_2$ as cathode material for secondary batteries, 209
hydrothermal synthesis of electrode materials Pyrochlore tungsten trioxide film, 461

Thermal modelling
electro-thermal modelling of polymer lithium batteries for starting period and pulse power, 393
Thermal stability
comparative thermal stability of carbon intercalation anodes and lithium metal anodes for rechargeable lithium batteries, 240
Thin-film batteries
thin-film rechargeable lithium batteries, 58
development and performance of a rechargeable thin-film solid-state microbattery, 63
Thin-film cathodes
fabrication and characterization of an Li–Mn–O thin-film cathode for rechargeable lithium microbatteries, 224
thin-film cathodes for secondary lithium batteries, 362
2/3 A-size rechargeable battery employing $LiCoO_2$ thin-film cathode, 403
Thionyl chloride
general safety considerations for high power $Li/SOCl_2$ batteries, 127
high rate lithium/thionyl chloride bipolar battery development, 180
development and characterization of a high capacity lithium/thionyl chloride battery, 186
electricity–heat power and energy balance for $Li/SOCl_2$ batteries, 259
lithium thionyl chloride cells and batteries. Technical predictions versus 1994 realities, 452
Toxicity
toxicity of materials used in the manufacture of lithium batteries, 138
Transition metal oxides
thin-film cathodes for secondary lithium batteries, 362
Transition metals
lithium intercalation in the divalent metal vanadates MeV_2O_6 (Me = Cu, Co, Ni, Mn or Zn), 465
Tungsten oxides
hydrothermal synthesis of electrode materials Pyrochlore tungsten trioxide film, 461

Vanadium
characterization of silver vanadium oxide cathode material by high-resolution electron microscopy, 68
lithium intercalation in the divalent metal vanadates MeV_2O_6 (Me = Cu, Co, Ni, Mn or Zn), 465
reversible lithium intercalation in alkali metal vanadium bronzes ($M_xV_6O_{13+\delta}$, where M = K, Rb or Cs), 470
Vanadium oxide
lithium insertion into silver vanadium oxide, $Ag_2V_4O_{11}$, 334
origin of the improved cycling capability of sol–gel prepared $Fe_{0.12}V_2O_{5.16}$ compared with V_2O_5, 342
formation of the ω-type phase by lithium intercalation in (Mo, V) oxides deriving from V_2O_5, 406
a new approach to the improvement of $Li_{1+x}V_3O_8$ performance in rechargeable lithium batteries, 501
Vanadium oxysulfide
structural, physical and electrochemical characteristics of a vanadium oxysulfide, a cathode material for lithium batteries, 246
Vanadium pentoxide
development of coin-type lithium-ion rechargeable batteries, 146

Water
effects of water additions on the passivity of iron in dimethoxyethane solutions, 85
